

PRESS RELEASE

Empowering Future-Ready Operations From Planning to Completion – and Beyond: Syntegon Presents Innovative Technologies And Services at FACHPACK

- Showcasing the SVX Agile with its patented cross-seal drive - a vertical packaging machine that combines speed, flexibility and superior user experience
- Making its European premiere: Kliklok ACC demonstrates how precision, format versatility, and efficient carton closing come together
- With its tailored services Syntegon supports customers as a reliable partner throughout the entire machine life cycle

Waiblingen (Germany), August 6, 2025. From planning to completion – and beyond: Across the life cycle of food processing and packaging lines, manufacturers are facing multiple challenges. New production lines must ramp up quickly to keep project timelines on track. Meeting production targets and ensuring high OEE while avoiding unplanned downtimes or disruptions is as important as flexibility: Manufacturers must be able to adapt to changing market demands – either with new formats, evolving product portfolios, or the integration of sustainable packaging materials. At FACHPACK 2025 in Nuremberg, Syntegon will demonstrate how powerful packaging technology, sustainable processes, and life cycle services can be combined into one integrated solution to meet these challenges. With two major product highlights on display, the company's trade show presence will focus on production reliability, flexibility, and future viability.

Technology Meets Partnership – for a Truly Holistic Approach

With more than 160 years of experience, at Syntegon, innovation goes hand in hand with long-term partnership and reliable support. That's why the company positions itself at FACHPACK as a strategic partner whose global network of experts supports its customers holistically throughout the entire machine life cycle: from precise planning of customer projects, rapid and seamless installation, flexible adaptation to market changes, to long-term reliable operation. Syntegon delivers seamlessly integrable systems with measurable added value.

That is why Syntegon is also showcasing its comprehensive service solutions at FACHPACK. Developed to maximize machine availability and flexibility, tailored Preventive Maintenance Kits and a broad range of size parts ensure that customers always have the right components available. With Syntegon's digital services, such as the cloud-based software solution Synexio, the transparency and efficiency of the customers' production processes can be significantly enhanced. Additionally, Syntegon offers customized Service Agreements, ranging from regular inspections to guaranteed performance, thereby minimizing production risks, reducing downtime, and simplifying complex processes.

Syntegon's life cycle approach goes beyond a service promise – and the two machines showcased at the heart of its FACHPACK exhibit are proof of that. Both the **SVX Agile** vertical bagger and the **Kliklok ACC** carton closer offer concrete answers to today's industry requirements – from fast commissioning and stable production processes to the flexibility needed to adapt to changing market demands.

Redefining Vertical Packaging

At the heart of Syntegon's booth is a vertical packaging machine developed to meet precisely the challenges of manufacturers of various industries. Featuring a unique, patented cross-seal drive, the SVX Agile combines the industry's highest output – up to 300 bags per minute – in a compact footprint. Prepared to process all common bag styles on a single machine, the SVX Agile supports a wide range of formats, making it a future-proof investment for flexible production environments. Without compromising on performance, the vertical form fill seal machine also processes sustainable paper-based materials and mono films. Thanks to its modular design, it can be flexibly upgraded to meet future requirements. Built to package products from a wide range of industries, the SVX Agile offers particular advantages such as easy washdown cleaning for the frozen food sector. Manufacturers benefit from a packaging solution that grows flexibly alongside evolving market demands.

Kliklok ACC Making its European Premiere

In addition to the SVX series, Syntegon will showcase the Kliklok ACC at FACHPACK – marking its first appearance at a European trade show. This servo-driven carton closer was developed for maximum precision and flexibility, processing a wide range of carton sizes and product types. With tool-free format changes, an integrated control system and energy-efficient drive technology, the Kliklok ACC is an ideal choice for companies aiming to modernize their secondary packaging processes sustainably. The machine can be seamlessly integrated with other Syntegon components, such as the ACE carton erector, to form fully automated line solutions.

Sustainable Transformation Starts With the Right Partner

As a strategic partner throughout the entire solution life cycle, Syntegon works with customers at eye level and puts their success at the centre. "Manufacturers need solutions that not only meet today's requirements, but also equip them for tomorrow's challenges," says Espen Mile, Vice President Strategy and Product Management of Food Vertical at Syntegon. "With machines like the SVX Agile or the Kliklok ACC, we demonstrate how sustainability, flexibility, and performance come together in a seamlessly integrated approach," adds Mark van Harwegen den Breems, Head of Food Vertical Sales at Syntegon. With decades of experience, global presence, and extensive technology expertise, Syntegon contributes significantly to transforming packaging processes sustainably – fully aligned with the key theme of FACHPACK.

Trade show visitors will have the opportunity to experience Syntegon's innovative packaging solutions and comprehensive service offerings live at FACHPACK from September 23 to 25 in Nuremberg – and to discover the company's role as a strategic partner in sustainable transformation. Syntegon will present its innovations in **Hall 1, Booth 257**.

Images

Ideal for packaging frozen food and many other products: The SVX Agile offers flexibility for future-proof production.

With the Kliklok ACC, Syntegon is presenting for the first time in Europe at FACHPACK the carton closer made for companies that rely on speed and flexibility for efficient and reliable packaging processes.

As part of its comprehensive service portfolio, Syntegon offers a wide range of size parts allowing customers to quickly react to changing market demands. For perfectly formed bags, Syntegon's OEM forming shoulders and tubes as well as add-on parts meet the highest design, material and workmanship standards.

About Syntegon

Syntegon is a leading global technology company and strategic partner to the pharmaceutical, biotech and food industries. With a strategic focus on the growing pharmaceutical and biotech sectors, Syntegon plays a vital role in global healthcare, providing in-depth process expertise and mission-critical technologies for the safe, efficient, and compliant production of essential medicines. In the food sector, Syntegon is recognized for high-speed, high-precision packaging solutions, drawing on unique engineering excellence to help manufacturers improve performance and product quality. Its global service business supports about 76,000 installed systems with a comprehensive lifecycle offering, ensuring uptime, efficiency, and long-term value.

In fiscal year 2024, Syntegon generated 1.6 billion euros in sales. Headquartered in the Stuttgart region in Germany, the company employs 6,900 people at 47 locations in more than 20 countries. With over 160 years of industry expertise, Syntegon delivers solutions that make a real difference, helping people live better, stay healthier, and trust the products they rely on every day.
