

# Upgrade Electric Glue Heads

## Topload Cartoners and Case Packers

In food manufacturing, packaging precision directly impacts profitability. Are rising energy costs, excessive adhesive usage, high material waste and regulatory changes draining your margins? Our new gluing solutions optimize your carton sealing process.

|                                                                                     |                                                                                     |                                                                                      |

Upgrade from pneumatic to electric glue heads to set new standards in gluing. The new system largely eliminates the need for compressed air and simplifies your operations by reducing the cleaning interval from once per day to once per week.

The electric glue heads integrate seamlessly into existing systems, requiring no changes to tanks or hoses. With up to 2 billion proven cycles, it delivers reliable performance while helping you achieve significant glue savings.

### Suitable machines

- TTx Topload Cartoners
  - Elematic Case Packers
- equipped with Nordson or Robatech gluing device

### Delivery contents (material no. 8113421150)

- Electric glue heads
  - Wiring diagram update
  - Spare parts catalog
- Installation to be quoted separately.

### Installation

The replacement can either be carried out by the customer or a Syntegon service technician who will install and test the components. Machine downtime: approx. 1 day.

**Would you like to upgrade your machine? Please reach out to your local Service partner and request a quote.**

### Your benefits

- Lower Total Cost of Ownership (TCO)
- Improved Overall Equipment Effectiveness (OEE)
- Significantly lower glue and power consumption
- Minimal cleaning and maintenance efforts
- Superior sealing performance

### Fast Return on Investment:
