# Seamless. One System.

## The Bosch Bar Packaging System

Inspired by our customers, we developed a system solution that is ready to cope with the specific requirements to efficient bar production. The Bosch Bar Packaging System features a seamless design architecture that raises productivity, expands capacity and boosts availability. The interfaces across the entire system have been harmonized to create a production process you can rely on.

Output and uptime are critical to a successful production operation. The Bar Packaging System carefully balances speeds across all components and is capable of a continuous output of up to 1,500 bars per minute. Innovative solutions such as the intelligent and contact-less infeed module with linear motor technology, the flow wrapper's fully automated splicer, the topload cartoners's tool-less format changeover and the system's overall hygienic design ensure a consistently high output with minimal downtime. All modular components in the Bar Packaging System work as one seamless system from product distribution to end-of-line packaging.

Bosch Packaging Technology is your experienced partner, providing you with comprehensive support throughout planning and installation, right through to after sales support. We will work closely with you, providing local, efficient service once production has started and beyond.

Raise the bar in efficiency and quality with the Bosch Bar Packaging System.

### Your benefits at a glance

- ▶ High Overall Equipment Effectiveness (OEE)
- ▶ High process safety and easy operation
- ▶ Future safe format flexibility
- ▶ Quick format changes and vertical restart
- ▶ Hygienic design

### Designed for your needs
