

# Stock Optimization.

INCREASED PROFITABILITY THROUGH IMPROVED SPARE PARTS MANAGEMENT.

## Analyze to optimize

The biggest challenge in spare parts management is achieving high availability with minimal stock. Improving your overall spare parts management requires detailed knowledge about your exact spare parts consumption and delivery times. With our consumption based Stock Optimization concept, we can provide you with detailed information specific to your spare parts profile. By combining an analysis of your individual parts consumption with up-to-date information on our Syntegon stock levels and delivery times, we will support you to improve procurement planning, maximize spare parts availability and increase the profitability of your stock investment.

By optimizing your stock you can improve your spare parts availability and increase the profitability of your stock investment.

## Your benefits

- ▣ Increased cost effectiveness of your stock
- ▣ Optimized spare parts availability
- ▣ Improved procurement planning
- ▣ Detailed report of your spare parts profile
- ▣ Transparent information on our Syntegon stock

## The tailored solution for your spare parts stock

Using specially developed software, a team of dedicated Syntegon experts will generate a detailed spare parts profile by analyzing your previous consumption as documented in our system. The profile not only contains your offer and order history with order frequency, but also our supply information and delivery times for your spares. In addition, discontinued and obsolete parts are shown in this analysis, allowing long-term procurement planning. For more in depth analysis, we can include the spare parts data from your procurement system (e.g. your own part numbers) in the analysis. Our experts will prepare a structured report of the analysis results to discuss with you in detail. We will identify potential improvements on both the supply and demand side, and work together with you to find a customized solution for the optimization of your spare parts management.
