

Digital Shopfloor.

ENHANCED MANUFACTURING PERFORMANCE AND FLEXIBILITY

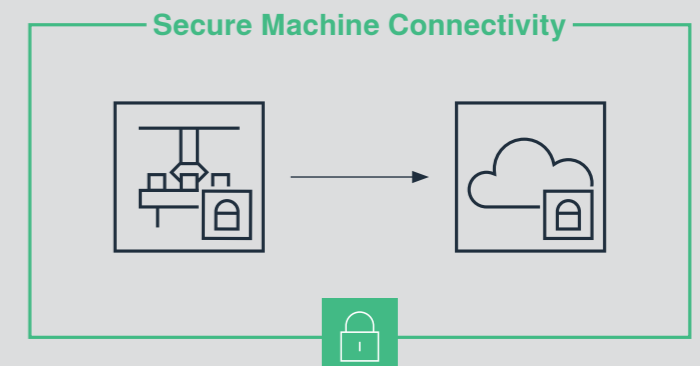

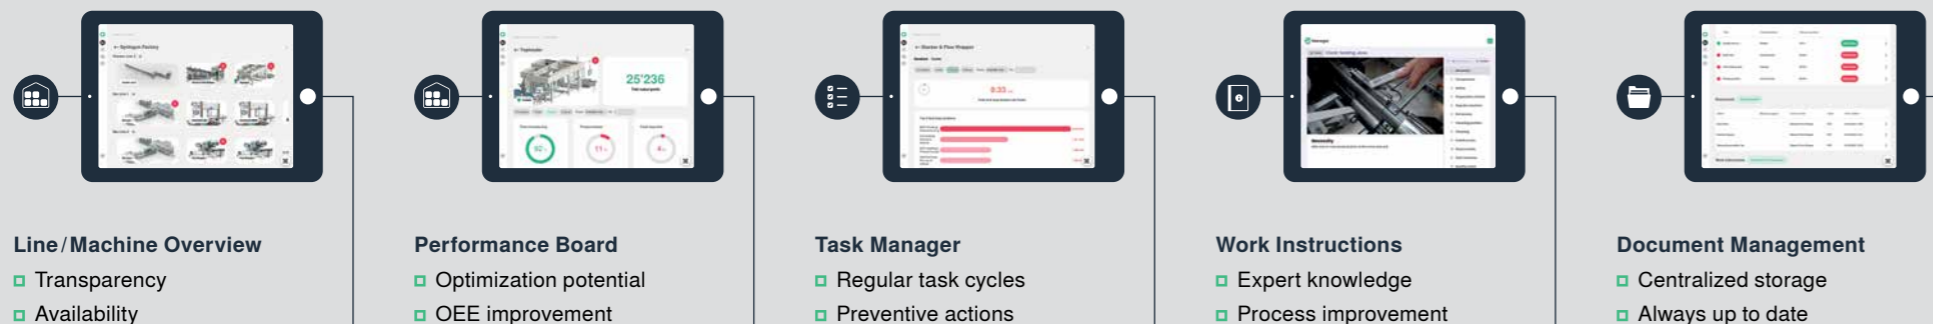

Manufacturing performance and flexibility at first hand.

Operational performance enabled by expert knowledge

- Shopfloor environment**
 Rapid market changes, unplanned machine stoppages accompanied by a lack of knowledge and increasing digitization are challenges that drive operational performance on the shopfloor.
- Increase effectiveness of your highly automated equipment**
 Proper handling of your equipment facilitated with our expert knowledge and training prolongs your machine lifetime. Our tools empower your team to optimize manufacturing requirements according to the needs of your dynamic production plans and high quality products.
- Monitor, improve, and share – transparent, anywhere, at anytime**
 Use our cloud based performance board to make line and machine availability transparent. Employees can see critical production data such as production time, losses and stops at a glance.

Derived from the machine profile, regular and preventive tasks linked with work instructions and documentation are indicated intuitively for all of your equipment. Hence, optimization potentials can be recognized faster and downtime can be minimized.
- Everything from a single source**
 From Syntegon you get everything from one source: machines or systems and its secure connectivity, additional services, and digital shopfloor tools combined with expert knowledge to keep your flexibility and manufacturing performance at a high level.

Enabling performance.
